

PALADI SHANTHAN KUMAR

Phone: +91 9705968049

Email: shanthan811@gmail.com

Professional Summary:

Results-driven Data Engineer with around 4 years of experience in designing, building, and maintaining scalable data pipelines and ETL processes using tools such as Azure Data Factory, Databricks, PySpark, and Microsoft Fabric. Proficient in SQL, Python, and cloud services within Microsoft Azure ecosystem. Proven expertise in data warehousing, data modelling, and data integration across diverse platforms and domains. Adept in collaborating with cross-functional teams, implementing CI/CD pipelines, and following Agile methodologies to deliver high-quality data solutions.

Education:

Bachelor of Technology in the stream of Electronics and Communication Engineering from Bharat Institute of Engineering and Technology, Hyderabad in 2022.

Core Competencies:

- **Programming:** SQL, Python, PySpark, PL/SQL
- **Data Engineering:** ETL, Data Warehousing, Data Modelling, Data Governance
- **Cloud Technologies:** Microsoft Azure (ADF, Synapse, Databricks, Fabric, Azure Functions)
- **Big Data:** Apache Spark, Delta Lake
- **Databases:** MS SQL Server, PostgreSQL, MySQL, Lakehouse
- **DevOps:** Azure DevOps, CI/CD
- **Other Tools:** Git, SQL Data Modeler

Experience:

Currently working as a Data Engineer with Hashstack Solutions Private Limited (formerly Zitisi Solutions LLP) Hyderabad from SEP 2022 to till date.

Professional History:

Project Name: CVS – Enterprise Data Platform Modernization (Current Project)

Tools & Technologies: Azure Data Factory (ADF), Microsoft Fabric, Lakehouse, Azure SQL Server, Azure Functions, Notebooks, ODBC, REST APIs, Medallion Architecture, Stored Procedures, Email Integration

Description:

Led the end-to-end modernization of CVS's legacy ETL ecosystem by migrating on-premises C# and SQL Server-based workflows into a cloud-native, scalable platform using Microsoft Azure and Microsoft Fabric.

- Migrated complex on-premises SQL Server and C# ETL logic into Azure Data Factory pipelines, leveraging ODBC and REST API integrations for ingesting data from various internal systems.
- Developed robust ADF pipelines to orchestrate secure file transfers from on-premises file systems to Azure Blob Storage.
- Built custom Azure Functions to automate the extraction of Excel files from client emails, storing them securely in Blob Storage for further processing.
- Re-architected transformation logic using SQL stored procedures for efficient cleansing, validation, and loading into Azure SQL Server for business consumption.

- Designed and implemented Medallion Architecture (Bronze, Silver, Gold layers) in Microsoft Fabric's Lakehouse environment for structured, governed, and performance-optimized data flow.
- Migrated ADF pipelines to Fabric notebooks and Lakehouse tables, creating reusable logic for ingestion, cleansing, and aggregation across multiple subject areas.
- Created views and stored procedures within Fabric to support BI teams with clean, consistent, and analytics-ready data.
- Ensured scalability, performance tuning, and maintainability of the new cloud data platform while aligning with enterprise data governance standards.

Project Name: CVS – Databricks ETL for Dynamics 365

Tool: Azure Data Factory, Databricks, PySpark, Dynamics 365, Azure SQL

Description:

- Designed and built scalable ETL pipelines using ADF and PySpark in Databricks for ingesting data from WP MySQL into Dynamics 365 environment.
- Leveraged Databricks notebooks for advanced data transformations and cleansing, enabling daily processing of over 1 million records.
- Integrated business logic and reusable transformations within Databricks for performance and maintainability.
- Collaborated with stakeholders to ensure seamless migration and accurate business intelligence reporting.
- Implemented ADF orchestration for data movement, and Azure DevOps CI/CD for automated deployment.

Project Name: FoleyCat – Enterprise Data Platform

Tool: Microsoft Fabric, Dynamics 365, Fabric Link, PySpark

Description:

- Developed and implemented ETL processes using Microsoft Fabric to efficiently extract, transform, and load data from multiple sources like CRM into a centralized Data Warehouse.
- Developed and implemented data extraction using Fabric Link plugin to get data from Dynamics CRM Finance and operation to Fabric lakehouse.
- Designed and implemented data pipelines in fabric for data transformation processes.
- Designed and built aggregate tables and stored procedures to streamline data transformation processes, significantly reducing data inconsistencies and improving data quality.
- Collaborated closely with cross-functional teams, including data analysts, developers, and business stakeholders, to ensure accurate data integration and alignment with business requirements.
- Optimized data workflows to enhance performance and scalability, resulting in faster data retrieval and improved reporting capabilities.
- Ensured data integrity and consistency through rigorous testing and validation of ETL processes and data transformations.

Project Name: Pepsi – Enterprise Data Warehousing

Tools: Azure Synapse Analytics, Azure SQL, ADF

Description:

- Developed and implemented ETL processes using Azure Synapse Analytics, creating robust pipelines to efficiently extract, transform, and load (ETL) data within the Azure ecosystem.
- Designed and executed Stored Procedures in Azure dedicated SQL Pool/Database, streamlining the internal movement and transformation of data for enhanced accessibility and usability, Reduced data inconsistencies by 80% through Stored Procedures.

- Collaborated with cross-functional teams to understand data requirements and ensure seamless integration, contributing to the overall success of business intelligence initiatives.
- Optimized data pipelines for enhanced efficiency and reliability.

Project Name: Billing UI for Dhenusya Organics

Tool: Python (Pandas, Tkinter), PostgreSQL

Description:

- Developed an interactive desktop billing application using Python's Tkinter framework and PostgreSQL backend.
- Integrated libraries for PDF generation and WhatsApp messaging to automate billing communication workflows.
- Implemented multithreading, data export to CSV, and exception handling to enhance system usability and performance.

Project Name: HRMS APP

Tool: PostgreSQL, SQL Data Modeler

Responsibilities:

- Transitioned legacy database systems to cloud-based PostgreSQL for improved reliability and scalability.
- Developed API-supportive views, stored procedures, and functions to facilitate real-time interactions with backend services.
- Designed an entity-relationship model using SQL Data Modeler and optimized query performance through indexing.

Strengths:

- Ability to learn new technologies quickly.
- Possess Strong decision-making skills, maintaining clarity and focus.
- Collaborated with cross-functional teams.
- Ability to work independently and as part of a team.
- Efficiently allocate resources, ensuring optimal use of available time, tools, and technologies.
- Possess good verbal and written communication skills, conveying ideas and information clearly and concisely.
- Active listening skills, ensuring a thorough understanding of requirements and effectively clarifying doubts.

Declaration:

I hereby declare that the information provided above is true to the best of my knowledge and belief.

Place: Hyderabad
